Criteria —

Acrocephalus arundinaceus is a widespread summer visitor to much of Europe, which accounts for less than half of its global breeding range. Its European breeding population is very large (>1,500,000 pairs), and was stable between 1970–1990. Although the species declined in various countries during 1990–2000, trends in the east of its European range—including key populations in Russia, Ukraine and Romania—were stable, and the species probably declined only slightly overall. Consequently, it is provisionally evaluated as Secure.

Country	Breeding pop. size (pairs)	Year(s)	Trend	Mag. %	References
