**Global IUCN Red List Category** —

**Criteria** —

*Anas crecca* is a widespread breeder across much of Europe (especially in the north-east), which accounts for less than a quarter of its global breeding range. Its European breeding population is large (>920,000 pairs), and was stable between 1970–1990. Although the species declined in a number of countries—notably Finland—during 1990–2000, and the trend of the stronghold population in Russia was unknown, it remained stable in many other countries and probably declined only slightly overall. Consequently, the species is provisionally evaluated as Secure.
